

3. Gutter Dam

Operation and Site Condition: A gutter dam can be selected to be a redundant BMP to the other sediment control BMPs. This BMP is designed with dual catchments so performance can be measured. A properly maintained gutter dam and the other erosion boundary control BMPs should be sufficient for the size of project.

Instruction: Install 6" dia ¾" gravel filled bag filters installed per detail and site plan. Don't drive on or park over this BMP.

Installation Schedule: Prior to any land disturbance

Maintenance Requirements: Remove sediment accumulation and restore any damage at the end of each work day or storm forecast whichever is first.

Applicable Trades: Assignments will be given to the trades expected to be on the job the most in any given week.

Maintenance Personnel: Project Manager. Also any trade damaging this BMP is expected to prepare or replace it
